

What is claimed is:

1. A recording medium apparatus comprising:

a storage section, which is provided in said recording medium apparatus, for storing a plurality of recording media;

5 an ejection slot for ejecting the recording media stored in said storage section to outside of said recording medium apparatus;

a designation section to designate recording media which is to be ejected through said ejection slot out of
10 the plurality of recording media stored in said storage section; and

a control section for consecutively executing ejection of said recording media designated through said designation section in sequence.

15

2. The recording medium apparatus according to claim 1, wherein said designation section is configured to designate recording media to be ejected for each type of recording media.

20

3. A recording medium ejection method of ejecting designated recording media from a storage section which stores a plurality of recording media, comprising the steps

of:

designating recording media to be ejected out of the plurality of recording media stored in said storage section; and

- 5 consecutively executing ejection of said designated recording media in sequence.
